EXPERIMENT - 12

Security, Governance and Administration
Library Book Issue Management

Student Name	AJAY K
Register / Roll No.	241401006
Subject	Low-Code Application Development using Zoho Creator
Application	Library Book Issue Management
Platform	Zoho Creator
Record Date	[enter date]

Aim

To implement and verify security and governance practices for the library application through role-based permissions, controlled administrative access, audit records, safe integration handling and backup management.

Experiment overview

Review and verification of least-privilege profiles, audit history, integration access and recoverable project exports.

Department of Computer Science and Business Systems
Rajalakshmi Engineering College

241401006

1. Security Requirements

Members should submit requests and see permitted own records. Staff should process the queue without unrestricted administration. The owner should manage application design, integrations and release decisions.

2. Permission Matrix

Capability	Library Admin	Library Staff	Library Member
Submit request	Yes	Yes	Yes
View requests	All permitted app data	Processing reports	Permitted own records
Edit request / status	Yes	Yes	No
Delete / export	Administrative profile	No	No
Dashboard	Yes	Yes	No
API access	Administrative control	Disabled	Disabled
Design / release	Owner / developer authority	No	No

Roles describe hierarchy; permission profiles control component actions; data sharing controls record visibility. A role name by itself does not enforce all three layers.
Adjust this matrix to match the profiles you actually configured in your own application.

3. Verification Procedure

1. Open Settings > User Permissions and inspect the three named profiles.
2. Check Library Member: form access enabled, edit/delete disabled, dashboard access disabled.
3. Confirm the Member API-access option is Disabled.
4. Review your field-permission and role-simulation evidence.
5. Open Operations > Audit Trail, select the library app and Book_Issue_Request_Form, and inspect actual events.
6. Verify your downloaded schema/data and Production backup files.

Tick off each step only after you have done it in your own app.

4. Governance Controls

Control	Project implementation / observation
Least privilege	Separate Admin, Staff and Member profiles. Members cannot process requests.
Field restrictions	[Describe your field permissions, e.g. Request_Status read-only for Members]
Data isolation	[State what you checked: role simulation or a real separate-account login]
Audit trail	[Describe the real create/edit entries, timestamps, actors and record IDs you saw]
Integration secrets	Use named connections. Do not put tokens or passwords in screenshots or exported documentation.
Notification state	A status field records the application outcome; it is not proof that a recipient read or received the message.
Release governance	Development is separated from Stage and Production. New changes require package review.
Recovery	[State which backup, schema exports and CSV files you retained]

5. Administrative Routine

Review active users and their assigned profile at the end of the lab. Remove unnecessary sharing only with authorization. Check failed workflows and unexpected audit entries, retain a dated backup, and document approved changes.

[Note any security settings you did or did not change. Anonymous public-form submissions must not be treated as verified member identity.]

Implementation Evidence

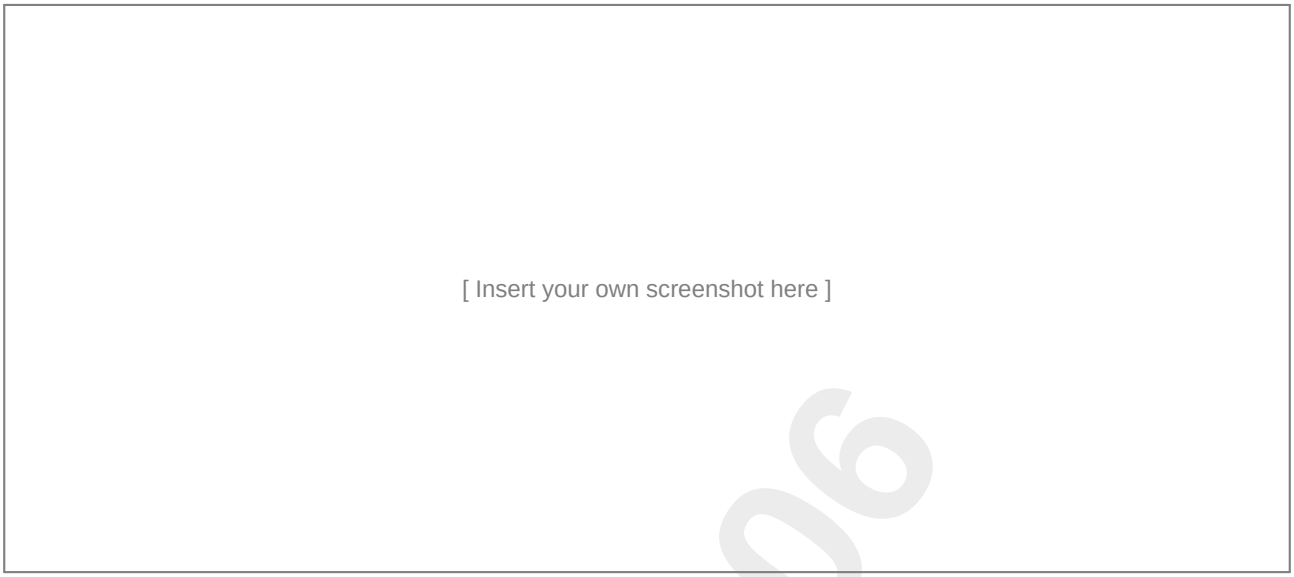

Figure 12.1. Library Admin, Library Staff and Library Member permission profiles.

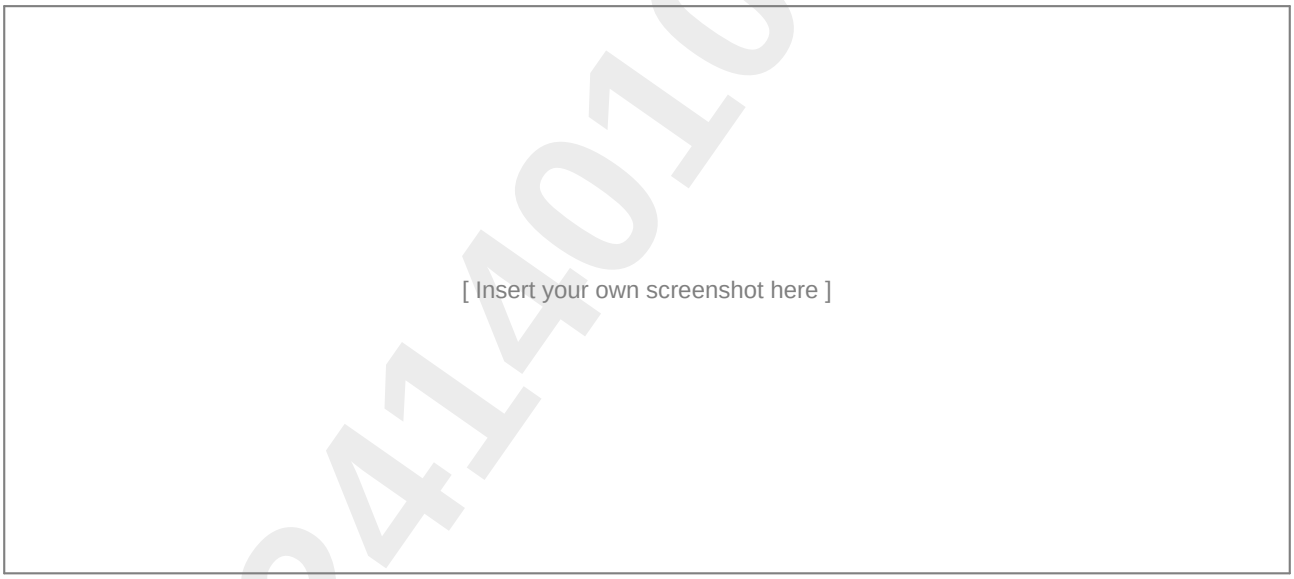

Figure 12.2. Member profile inspection: edit/delete/dashboard permissions and API access.

241401006

Implementation Evidence

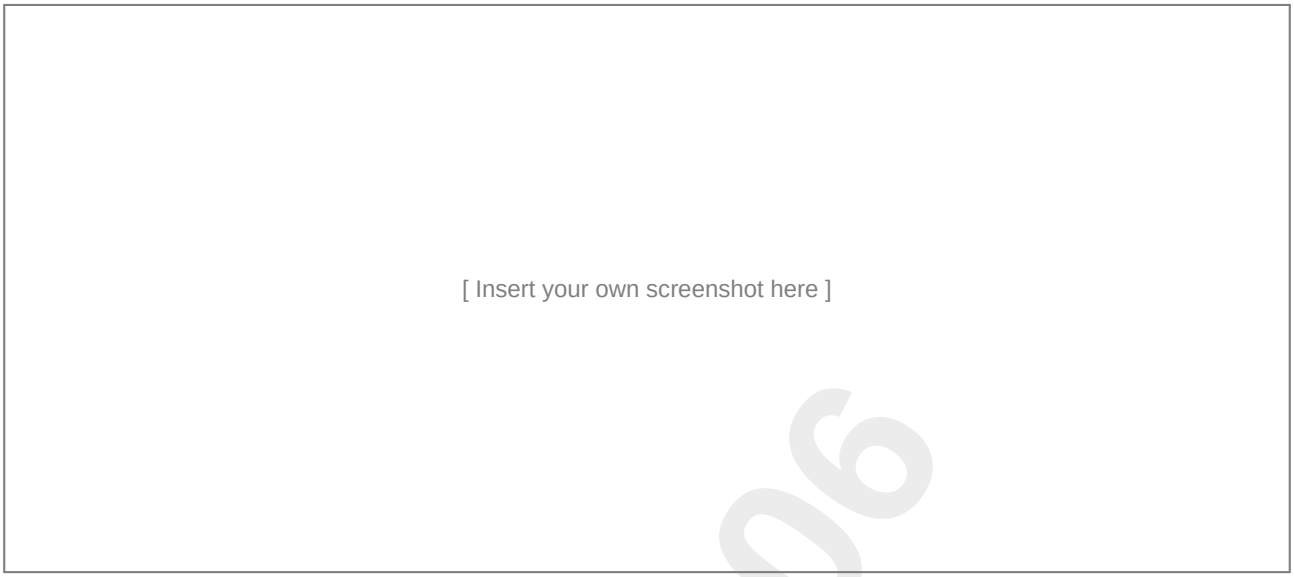

Figure 12.3. Audit trail showing actor, date/time, action and record ID.

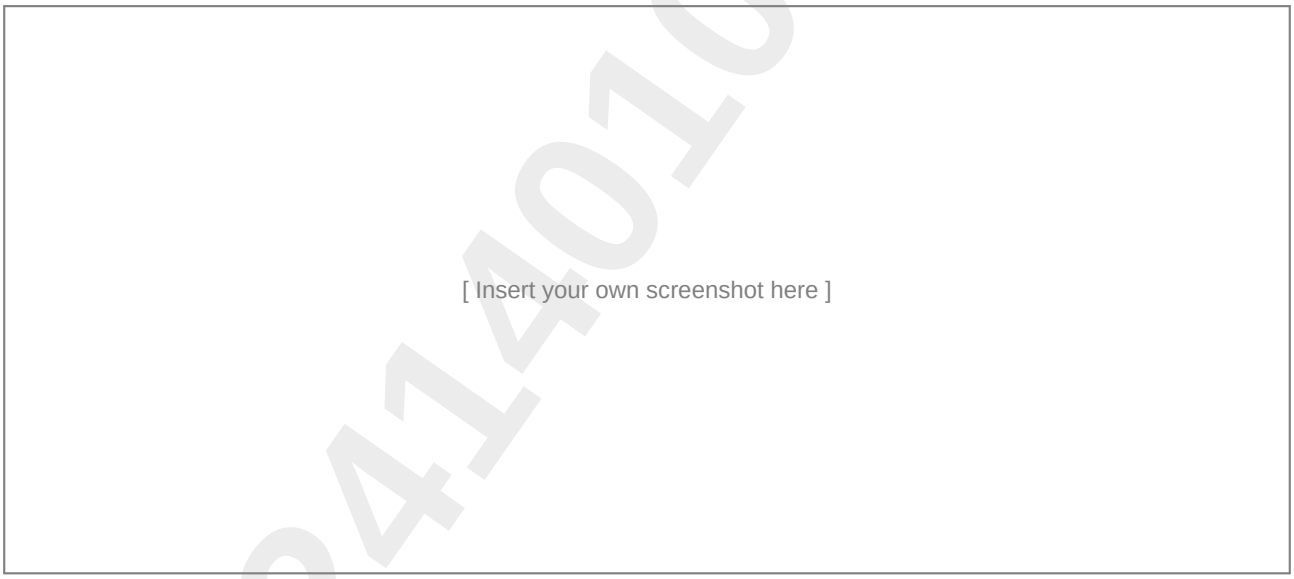

Figure 12.4. Field-level permission evidence.

241401006

6. Result

[Summarise what you actually verified in your application: the permission model, the audit events you inspected and the backup set you retained.]

7. Verification Limits

Item	Status
Named profiles and visible Member restrictions	[Verified / Not verified]
Audit history	[Verified / Not verified]
Role simulation	[Verified / Not verified]
Real separate-account login	[Verified / Not verified]
Backup restoration	[Verified / Not verified]
Formal compliance certification	Not assessed; this is a student lab
