Aim

To design and develop a Library Book Issue Management application in Zoho Creator by creating reports and a dashboard using UI Builder. The application organises book issue requests based on Book Category and Member Type, allowing library staff to easily view and manage requests.

Procedure

1. Log in to Zoho Creator and create a new application named Library Book Issue Management.
2. Create the form Book_Issue_Request_Form.
3. Add the required fields using the Basic Fields available in Zoho Creator: Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox.
4. Organize the form into sections covering Member Details, Contact Details, and Book Request Details.
5. Configure field validations such as mandatory fields, email validation, phone validation, and number range for copies requested.
6. Submit sample book issue requests and member profile records to populate the application.
7. Create the report Book_Issue_Request_Report to list all submitted requests.
8. Create the second report named Member_Type_Request_Report.
9. Select Kanban as the report format and group the columns by Member Type.
10. Configure the Kanban Properties — group columns by Member Type, and set Empty/Deleted Value Column visibility.
11. Create a custom page using UI Builder and name it Library_Issue_Dashboard.
12. Add summary stat cards, the Distribution by Request Status chart, the Member Type panel, Quick Links, and the Distribution by Book Category chart to the dashboard.
13. Arrange and save the dashboard so that library staff can view book requests at a glance.
14. Preview/publish the application and verify that the submitted records are displayed correctly in both reports and the dashboard.

Reports and Dashboard Overview

The application is built on the Book_Issue_Request_Form, which stores every book issue request along with the requesting member's details, and a Member Profiles report that stores member records. A Kanban-style report is created on the request form so staff can view records grouped by Member Type, and this is combined with summary charts on a single custom page (Library_Issue_Dashboard) built with UI Builder for a consolidated, at-a-glance view.

Component	Format / Grouping	Purpose
Book_Issue_Request_Report	List / table report of all submitted requests	Lets staff see every book issue request with member, book category, subject interests, and issue-date details in one report.

Member_Type_Request_Report	Kanban, grouped by Member Type	Lets staff see requests organised by who raised them — Student, Faculty, or Staff — as separate columns of cards.
Library_Issue_Dashboard	UI Builder custom page	Brings summary stat cards, the Distribution by Request Status chart, the Member Type panel, Quick Links, and the Distribution by Book Category chart together on one page.

Explanation of Screenshots

The following screenshots show the Library_Issue_Dashboard, the Book_Issue_Request_Report, the Member Profiles report, and the UI Builder / report-configuration screens as rendered in Zoho Creator after the sample records were submitted.

1. Member Profiles — Kanban View Grouped by Member Type

The Member Profiles report, switched to Kanban view and grouped by Member Type, arranges the submitted member records into columns headed Faculty, Staff, and Student. Each card shows the member's name and roll/register number — for example “Alice Thompson – R2026001” and “David Lee – R2026004” under Faculty — giving staff an immediate, drag-and-drop friendly view of members under each type.

Fig. 1 — Member Profiles: Kanban view grouped by Member Type

2. Member Profiles — Calendar View

The Member Profiles report can also be viewed as a Calendar, plotting each member's registration date across the month. This lets staff see registration activity by day, such as the entries recorded on 14–19 September 2026.

Fig. 2 — Member Profiles: Calendar view by registration date

3. Book Issue Request Report

The Book_Issue_Request_Report lists every submitted book issue request in table form, with columns for Member, Register Roll Number, Member Type, Email Address, Contact Number, Hostel Residential Address, Book Category, Subject Areas of Interest, Number of Copies, Purpose of Borrowing, and Preferred Issue Date. The Member Type column is colour-coded — green for Staff, purple for Faculty, and red for Student — so staff can scan requester type at a glance.

Fig. 3 — Book_Issue_Request_Report: full request table

4. Dashboard — Summary Cards and Distribution Charts

The top of the Library_Issue_Dashboard shows four summary stat cards — Total Faculties, Total Staffs, Total Students, and Count of Book Issue Request. Below these, a Distribution by Request Status bar chart

plots the count of Pending, Collected, and Approved requests, a Member Type panel shows the running totals of Faculties, Staffs, Students, and the overall Total, and a Quick Links panel gives one-click shortcuts to add a new book issue request, view the request report, add a new member profile, and view all member profiles.

Fig. 4 — Dashboard: summary cards, request-status chart, member type panel, and quick links

5. Dashboard — Book Category Chart and Request Table

Scrolling further down the dashboard shows the Distribution by Book Category bar chart, comparing how many requests fall under Other, Information Technology, and Data Science. Beneath the chart, the Book Issue Request Report table is embedded directly on the dashboard, giving staff the same detailed request records without leaving the dashboard view.

Fig. 5 — Dashboard: book-category chart with the embedded request table

6. UI Builder — Editing the Dashboard Layout

The Library_Issue_Dashboard was assembled in UI Builder by dragging Panel, Chart, and Report elements onto the canvas. The editor view below shows the summary-card panel, the Distribution by Request Status and Distribution by Book Category bar charts, the Member Type panel, and the Quick Links panel being arranged before the layout was saved and published.

Fig. 6 — UI Builder: arranging the dashboard panels and charts

7. Configure Report — Calendar Format

When configuring the Member Profiles report, the Calendar format option was selected from the Configure Report dialog, mapping Member Type as the Event title and Registration Date as both the Event starts on and Event ends on fields, producing the calendar view shown earlier in Fig. 2.

Fig. 7 — Configure Report: selecting the Calendar format

8. Kanban Properties — Grouped by Member Type

The Kanban Properties panel for the Member Profiles report shows the configuration used to produce the Kanban view in Fig. 1: columns are grouped by Member Type, with the Empty Value Column, Deleted Value Column, and Record Count per Column options all set to Hide, and no additional column filter or sort applied.

Fig. 8 — Kanban Properties: grouping the report by Member Type

Output

The Library Book Issue Management application was successfully created in Zoho Creator with:

- Book_Issue_Request_Form containing the required Basic Field types (Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox).
- Book_Issue_Request_Report showing all submitted requests with member, book category, subject interest, and issue-date details.
- Member_Type_Request_Report in Kanban format, grouped by Member Type (Faculty, Staff, Student).
- Library_Issue_Dashboard created using UI Builder, combining stat cards, charts, and quick links.
- Sample book issue request and member profile records displayed successfully.

The application provides a structured and user-friendly way for library staff to view, categorize, filter, and manage book issue requests.
